

## **Portable Appliance Testing.**

**Duration: One day.**

### **Course overview:**

The Regulations place responsibility on employers with regard to electrical safety. About a quarter of all reportable electrical accidents involve portable apparatus. The majority are caused by electric shock but many others result in burns from arcing or fire.

This course deals with the specifics of Portable Appliance Testing (PAT) and is ideally suited to those who fulfil the function.

### **Course content:**

Upon completion the delegates will have gained knowledge of:

- Electrical theory.
- Electrical Safety at Work Regulations.
- PAT testing intervals and electrical dangers.
- Inspection and testing requirements.
- PAT demonstration.

Successful completion will prepare delegates to undertake Portable Appliance Testing and implement a structured test schedule and record the results.
